Practical Application of DEQ Research
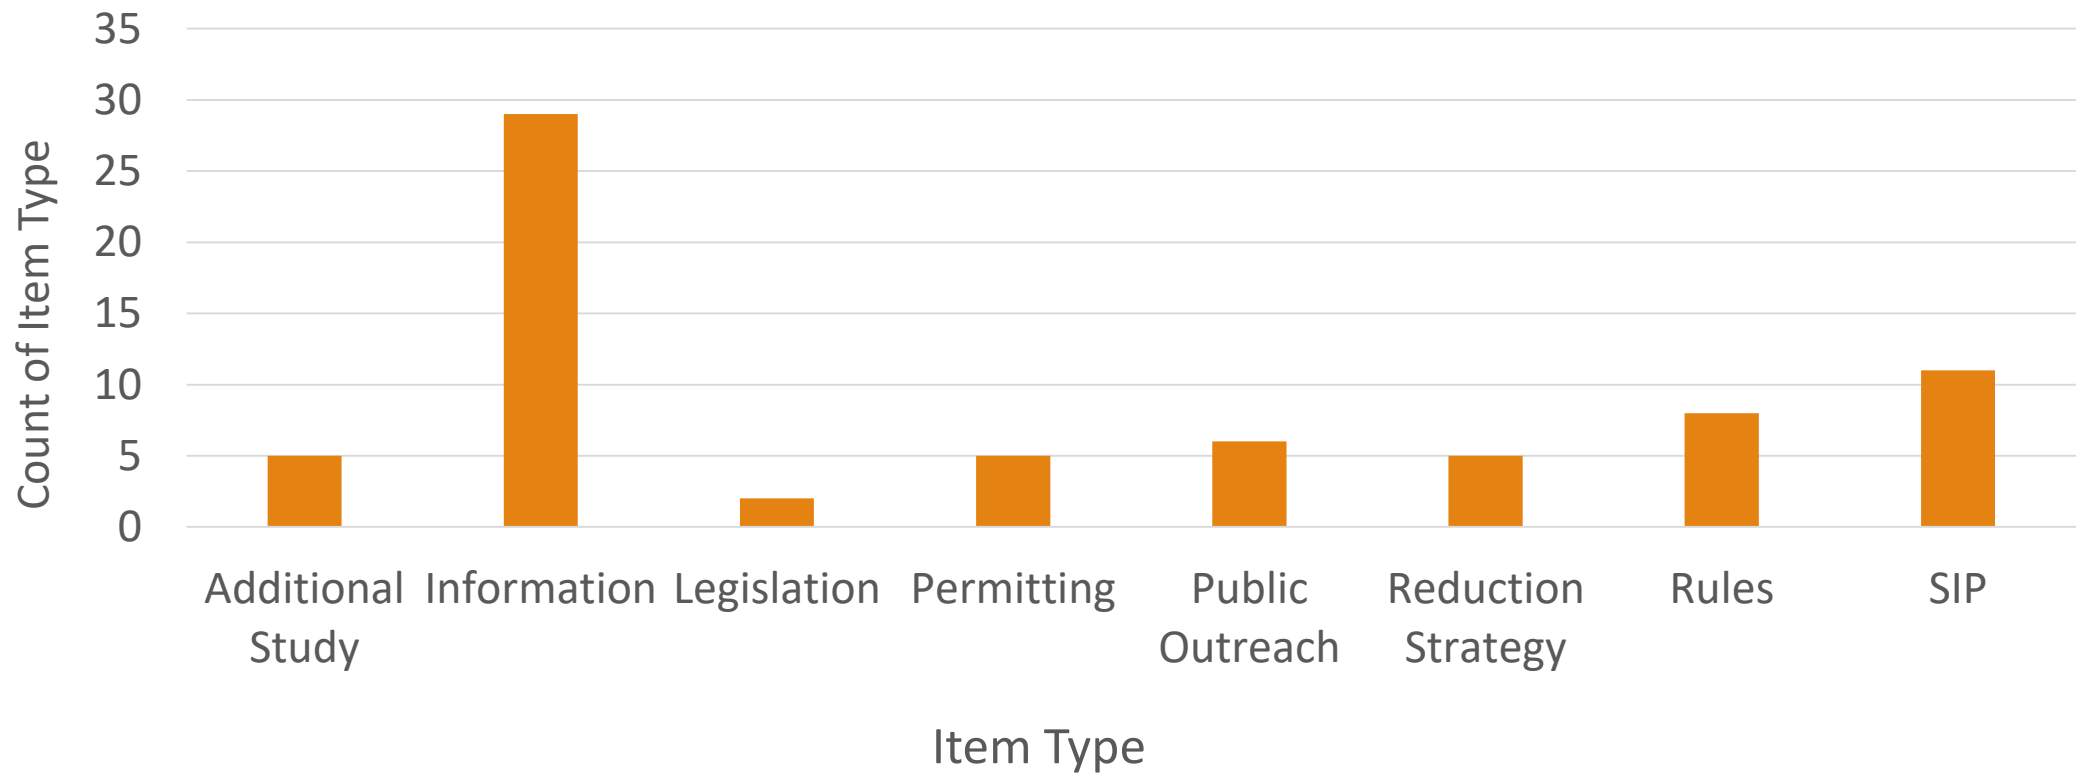

OVERVIEW

# Research: Reported Actionable Item Type

Percent of Projects Resulted in Reported Actionable Item Type

Review Methodology

❑ Categorizing an item as Rule, SIP, or Permit, indicates that these changes have actually occurred and not something that can/will occur from the information given.

❑ If information states that it could inform the feds on how to regulate, I label it in the information category.

❑ I considered any inventory improvement as information.

❑ Labeling the actionable item does not indicate any value.

❑ Labeling also does not assess the cost-benefit of the research.
